

Angular / React / JavaScript Assignment - Junior

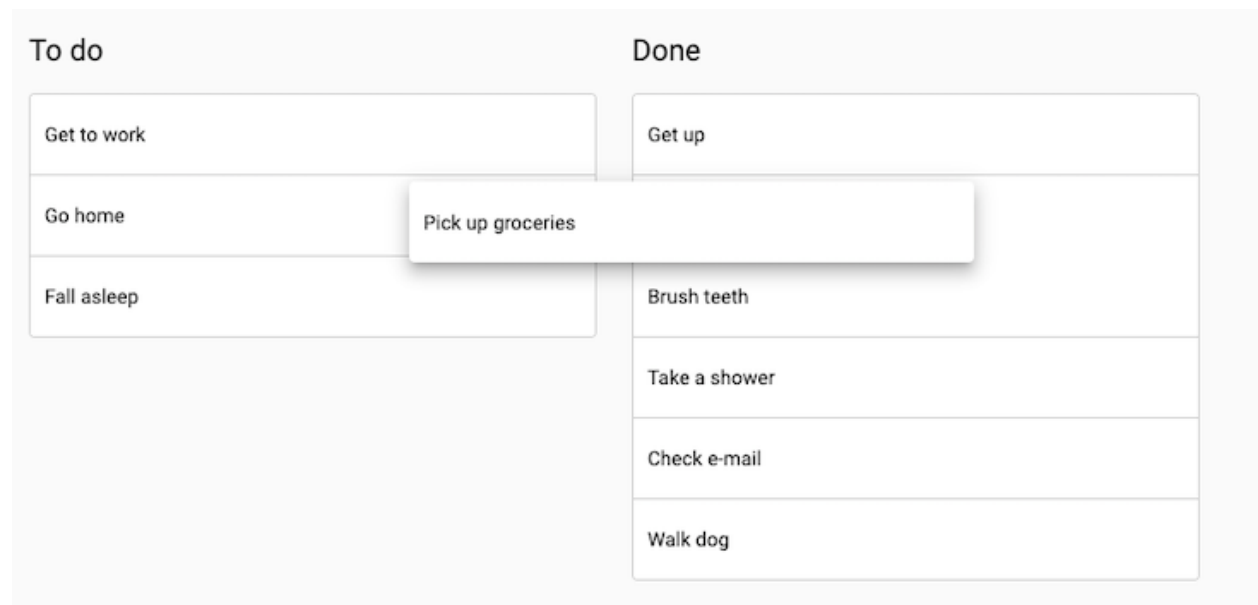

PART 1: Create a form to save & edit task in common services/ Local storage/ JSON Server.

- Create components to create & edit task
- TASK Schema
 - Title (text)
 - Description (text)
 - Status (ENUM [Open, In-Progress, Completed])
 - Datetime stamp (timestamp)
- Save the Task in common service/ Local storage

PART 2: Listing of task and ability to change task status with drag and drop or edit task.

- Listing will contain three columns
 - Open
 - Work in progress
 - Completed
- When a task is dropped to work in progress column, the status of the task is changed to work in progress in the services.

Reference Image:

NOTE: Above image contains 2 columns, this task contains 3 columns. Drag & Drop is good to have. If you are able to complete the task with drag and drop feature it will be a plus point. You can also use JSON Server in place of Services / Local storage.

Submission Instructions

- Create a repo and push completed code to master branch. [GitHub, Bitbucket or GitLab]
- Code copied from the internet will be rejected.
- Questions will be asked on the code you submit if your task is selected.
- Code should be well commented.
- You will be evaluated on code logic, patterns and quality of code.
- Time to complete the above task is 2 days (16 hours).

ALL THE BEST!!!
